

Dear Sophie,

I am writing to express my interest in the Business Data Analyst position at EDF Danmark, as advertised at Jobindex. As a person with passion for data, I am excited about the prospect of leveraging insights that drive strategic business decisions. The opportunity to join an ambitious team dedicated to creating intelligent and sustainable local communities towards a greener globe is very appealing to me.

I am particularly drawn to the opportunity to kickstart my career in the field of data analysis and be part of the transition to green technology and reduce carbon emissions in Denmark and globally. With my blend of technical proficiency, passion for data, and cross-functional collaboration skills, I am confident in my ability to make a meaningful contribution to your team.

During my recent internship at Collectia, as part of my AP graduation in Computer Science, I gained valuable experience as a member of the Data Science/BI team. I am proficient in extracting data from various sources like databases and files using SQL or Python. My proficiency in Python and the Pandas library enables me to extract, load, explore, preprocess, manipulate and analyse data in order to effectively deliver tailored solutions in various formats to meet user requirements from different stakeholders within the organisation.

Also, during my internship I worked as a link between the business and my team, therefore, I am proficient in communicating with non-technical stakeholders both in writing and verbally in Danish and English. This skill is integral in ensuring alignment between technical endeavours and broader organisational objectives.

Thank you for reviewing my application. I am enthusiastic about the opportunity to discuss in further detail how my skills and experiences are in line with EDF's objectives during a job interview.

Best regards,

Cem Akay Türker
