

Dear Troels,

I recently came across your job posting seeking Data Analyst for the Digitalization and Innovation Team at Novo Nordisk and I'm excited to express my interest in this opportunity.

I am very passionate about working with large and complex data structures and I feel great satisfaction knowing that the data contribute to making better and informed decisions that can affect the lives of millions of people around the world. The idea of joining a new dynamic team that develops and implements innovative solutions and drive the change of tomorrow is very pleasing.

As part of my AP education in Computer Science I joined Collectia for a three-month internship in the last semester where I was actively involved in the Data Science/BI team. I learned to collaborate closely with stakeholders to extract and transform data from various sources using languages like SQL, T-SQL and Python. With my experience in Python and the Pandas library I can manipulate and analyse the data, ultimately delivering tailored solutions in desired format to meet user requirements.

Additionally, my experience working as a link between the business and different departments within the organisation has improved my ability to effectively communicate complex technical concepts to non-technical stakeholders. This skill would be invaluable in ensuring alignment between the technical aspects of the role and the broader organisational goals.

I am particularly drawn to the opportunity to contribute to the development of a new office and shape the agency's approach to working with data. I am confident that my combination of technical skills, great passion for data, and ability to collaborate cross-functionally would make me a valuable asset to your team.

Thank you for considering my application. I look forward to the opportunity to discuss how I can contribute to implementing innovative solutions at Novo Nordisk.

Best regards,

Cem Akay Türker
